

*Interested in getting genomic-enhanced EPDs on your cattle?
Want more data on your registered females?*

The Rally research collaboration between RAAA and Neogen is designed to increase phenotypic data collection and submission for mature weights, body condition scores and genotypes on Red Angus females. Female genotype and phenotype information helps to improve genetic predictions and overall data on your Red Angus herd.

This is a really great opportunity to receive genotyping at a reduced rate.

REQUIREMENTS:

- Registered females only
- Must test 90% of females on active inventory
 - Already genotyped females can count toward this 90%
- There is also no cap on herd size, as long as the 90% requirement is met, so this program is tailored to small and large producers
- Samples submitted for the Rally need to be TSUs (tissue)

BY PARTICIPATING IN THE RALLY YOU WILL RECEIVE:

- GGP100K (GGP-LD) testing for \$22 (regularly \$50)
 - OS and MA testing can be added for \$2/test; other defect testing is normal pricing
- \$5 Age Rebate
 - At completion of testing, you will receive a one-time reimbursement of \$5 for females submitted that are 6+ years old (circa 2016)
- \$5 Phenotype Rebate
 - Submit both Mature Cow Weights (MCW) and Body Condition Scores (BCS) for a one-time reimbursement
 - Must be on every cow that weans a calf that season
 - Must be within a week of calf weaning date
 - You don't have to apply for the rebates if you don't want to; these are just additional ways to save money!

RED ANGUS
RANCH TESTED. RANCHER TRUSTED.
